

Run 632900: $\tau_0 = 10.78$ MPa, $k_{\text{pmax}} 2.5\text{e-}11$, $a-b = +0.003$ — observed slip from the seismicity catalog, 20 m west of the well

A. Amplitude — solid observed, dashed simulated

B. Front — the threshold crossings nearly coincide

C. Shape — each profile over its own peak
