

Run 632901:  $\tau_0 = 11.11$  MPa,  $k_{\text{pmax}} 2.5\text{e-}11$ ,  $a-b = +0.003$  — observed slip from the seismicity catalog, 20 m west of the well

A. Amplitude — solid observed, dashed simulated

B. Front — the threshold crossings nearly coincide

C. Shape — each profile over its own peak
