

Effect of storage $\phi\beta$ at understressed $\mu_0=0.46$

fixed: $\mu_0=0.46$, $\bar{\sigma}_0=27.99$ MPa ($\tau_0=12.9$ MPa, understressed), permev F, Taiyi perm map ($1.1\text{e-}12$ near-well / $4\text{e-}13$ far)

WARNING: $\phi=0.01$ for the first four runs but 0.005 for 632721 — $\phi\beta=5\text{e-}12$ is unreachable at $\phi=0.01$ without β below the $1\text{e-}9$ floor

all fits on 0–8.00 d, observed front refit on the same window; front threshold = each run's own dc
